

# Acid-base Titration

Part A only

acid + base

salt + water

AIM: find molarity of acid

Theory in chapter 4

see example 4.10 on p 122

Normally repeat titration 3 times

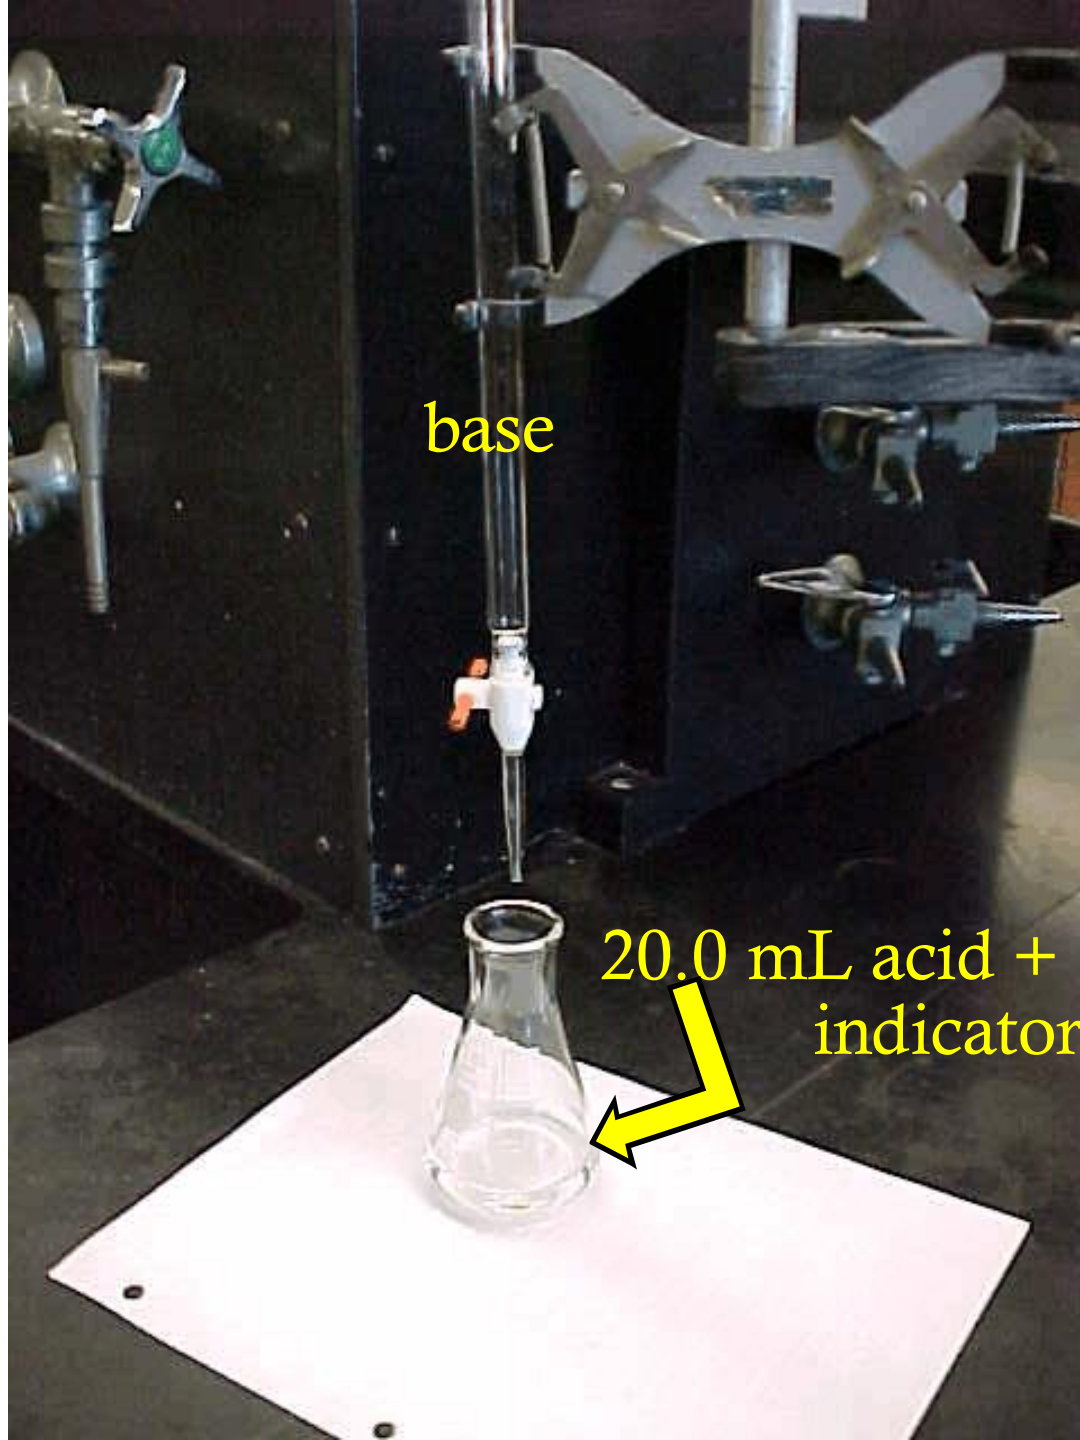

Get average volume of base used

Use average to find acid molarity

about 23 mL  
acid in small  
beaker

base

20.0 mL acid +  
indicator

clear before  
end point

pink at  
end point
