

General Chemistry Lab Reports

These should include the following sections:

Name (on all sheets)

Introduction: A sentence or two explaining what the overall object of the experiment was. This may be written on a blank sheet of paper.

Data Sheet(s): All the data (mass, volumes, other measurements) recorded during the lab.

Calculations/Answers: Answers to questions and all calculations necessary. Be sure to show all steps used to derive your numerical answers for full credit. Show all units, and give calculation answers to the correct number of significant figures. This section may be written on blank sheets of paper.

All sheets are to be stapled together in the above order, and submitted the following lab period.
